Contact angle measurement

(parameter for the hydrophilicity of a material)

The flatter the drop, the more pronounced the hydrophilicity of the material.

Panasil® initial contact shows extremely fast spreading of the water drop and reaches the lowest contact angle after 3 seconds compared to the competitive materials.

EXCELLENT HYDROPHILICITY

- **Panasil® immediately overcomes any residual moisture** on direct contact with the tooth surface and ensures a precise result.

- **Panasil® ensures sharply defined preparation margins** even in **extreme situations**, e.g. in the case of difficult hemostasis.
